## **SpaceVac Scoops Top Innovation Award in Australia!**

**Northampton based SpaceVac International are celebrating this week after taking the top prize for innovation at a huge Industry event in Australia.**

SpaceVac International - who manufacture high-level cleaning systems that enable operators to clean safely from the ground floor - were nominated in the highly competitive "Cleaning Equipment" category which saw the product pitched against products from some of the biggest names in the Specialist Cleaning industry.

The system won out with judges noting its simple operation and huge benefits to operators in terms of both health and safety and time and cost savings.

Scott Rozendaal sales director of Spillz said being a finalist in the INCLEAN Innovation Awards for the second consecutive year has created great exposure for the Spillz company. "Winning the Innovation Award for equipment with Spacevac is a great step for Spillz company to becoming a leading innovative supplier, as we are always looking to find new developments that can push the industry forward," Rozendaal said.

"We took on the Spacevac High Level Cleaning range as they are utilising modern technology to revolutionise the cleaning industry and lift both the standard of cleaning and safety in the industry."

Meanwhile SpaceVac International CEO Tommie Nisula said "This award is confirmation again that SpaceVac represents a truly global solution to some of the toughest challenges that our colleagues in the FM sectors come up against. Our congratulations go to the team at Spillz who have been a fantastic addition to the SpaceVac family and we are really looking forward to continuing this really exciting expansion into Australasia through the rest of 2018"
